

Final Exam
QBA 201 – Fall 2013-14
Managerial Statistics
Thursday, 30-1-2014

NAME: _____ **ID #:** _____

Dr. Kassar

Total Marks: **100 points** Duration: **120 min.**

INSTRUCTIONS

1. This is a **closed** book/notes exam.
2. Make sure your exam has **13 pages (including cover page)**.
3. For problem solving questions, please use the **allocated** space **on this exam paper** to provide your detailed calculations and answers.
4. All forms of communications including **cell** phones are **not permitted**.

Statement of Academic Integrity

Ethical behavior and professional manners are expected in class and during exams. Any alleged violation will be reported to the School Academic Committee and/or to the Dean of Students for possible disciplinary actions.

Statement to be signed by the student:

I have read LAU Student Code of Conduct, LAU Student Code of Ethics, and LAU Code of Ethics, and I pledge not to commit or attempt to commit any violation of any of their codes in this examination.

Signed: _____

1	2	3	4	5	6	7	Grade

1. **(15 Points)** At a computer manufacturing company, the actual size of computer chips is normally distributed with a mean of 1 centimeter and a standard deviation of 0.1 centimeter. A random sample of 12 computer chips is taken.
 - a. (5 Pts.) What is the probability that the sample mean will be below 0.95 centimeters?
 - b. (5 Pts.) What is the probability that the sample mean will be between 0.99 and 1.03 centimeters?
 - c. (5 Pts.) Above what value do 2.5% of the sample means fall?

2. **(15 Points)** A major department store chain is interested in estimating the average amount its credit card customers spent. Fifteen credit card accounts were randomly sampled and analyzed. The sample revealed an average of \$50.50 and variance of 400.
- (10 Pts.) Construct a 95% confidence interval for the average amount its credit card customers spent on their first visit to the chain's new store in the mall. Interpret the result.
 - (5 Pts.) Find the sample size needed so that there is a probability of 0.95 that the estimate is within an error of \$3.

3. **(15 Points)** A recent study revealed that 225 students out of 300 use a PC in their work/study on a regular basis.
- a. (10 Pts.) Construct a 90% confidence interval for the true proportion of all students who regularly use a PC. Interpret.
 - b. (5 Pts.) Construct a 90% confidence interval for the true proportion of all students who do not use a PC regularly.

4. **(15 Points)** An industrial supplier has shipped a truckload of printer cartridges. A sample of 15 cartridges is randomly selected. The sample resulted in a mean weight of 11.13 ounces and a sample standard deviation of 0.15 ounces. Test the supplier's claim that the mean weight is more than 11 ounces. Use $\alpha = 0.01$.

5. **(15 Points)** A random sample of 10 waiters revealed the following hourly earnings, including tips: 19, 18, 15, 16, 18, 17, 16, 18, 20, and 13 (Units are dollars). Suppose that the hourly earnings are normally distributed with a standard deviation of \$3.00.
- (8 Pts.) Estimate with 95% confidence the mean hourly earnings.
 - (7 Pts.) Test the hypothesis that the population is different than \$15. Use $\alpha = 0.05$.

6. **(10 Points)** A market researcher is interested in studying the incomes of consumers in a particular region. A random sample of 46 individuals resulted in an average income of \$25,000 and a standard deviation of \$2,000. Find a 80% confidence interval for the average income.

7. **(15 Points)** The Marriott Tub Company manufactures two lines of bathtubs, called model A and model B. Every tub requires a certain amount of steel and zinc; the company has available a total of 240 pounds of steel and 48 pounds of zinc. Each model A bathtub requires a total of 12 pounds of steel and 2 pounds of zinc, and each yields a profit of \$90. Each model B bathtub can be sold for a profit of \$70; it in turn requires 10 pounds of steel and 3 pounds of zinc.
- a) (5 Pts.) Formulate a linear programming problem that determines the best production mix of the bathtubs.

- b) (5 Pts.) Graph the feasible region.
- c) (5 Pts.) Solve the LP problem.

Key Formulas

Population mean: $= \frac{\sum X}{N}$; **Sample mean:** $\bar{X} = \frac{\sum X}{n}$

Sample standard deviation: $S = \sqrt{\frac{\sum (X - \bar{X})^2}{(n-1)}}$

Or use equivalently: $S = \sqrt{\frac{n \sum X^2 - (\sum X)^2}{n(n-1)}}$

Standard normal value: $Z = \frac{X - \mu}{\sigma}$

Z-value of $\bar{X}$, when μ and σ known: $Z = \frac{\bar{X} - \mu}{\sigma / \sqrt{n}}$

Confidence interval for μ , with σ known:

$$\bar{X} - Z_{\alpha/2} \frac{\sigma}{\sqrt{n}} \leq \mu \leq \bar{X} + Z_{\alpha/2} \frac{\sigma}{\sqrt{n}}$$

Confidence interval for μ , with σ unknown:

$$\bar{X} - t_{\alpha/2} \frac{s}{\sqrt{n}} \leq \mu \leq \bar{X} + t_{\alpha/2} \frac{s}{\sqrt{n}}$$

Sample proportion: $\hat{p} = \frac{X}{n}$

Confidence interval for proportion:

$$\hat{p} - Z_{\alpha/2} \sqrt{\frac{\hat{p}(1-\hat{p})}{n}} \leq p \leq \hat{p} + Z_{\alpha/2} \sqrt{\frac{\hat{p}(1-\hat{p})}{n}}$$

Sample size for estimating mean: $n = \left(\frac{\sigma Z_{\alpha/2}}{E} \right)^2$

Testing a mean, σ known: $Z = \frac{\bar{X} - \mu}{\sigma / \sqrt{n}}$

Testing a mean, σ unknown: $t = \frac{\bar{X} - \mu}{s / \sqrt{n}}$
