

Please solve the following exercises and submit **BEFORE 5:00 pm of Wednesday 21st of October**. Submit on Moodle.

Exercise 1 **(10 points)**

Let A, B, and C be sets. Show that:

- a) $(A \cup B) \subseteq (A \cup B \cup C)$
 $\{x | x \in (A \cup B)\}$ (Assumption)
 $\Rightarrow \{x | x \in A \vee x \in B\}$
 $\Rightarrow \{x | x \in A \vee x \in B \vee x \in C\}$ (Addition)
 $\Rightarrow \{x | x \in (A \cup B \cup C)\}$
- b) $(A \cap B \cap C) \subseteq (A \cap B)$
 $\{x | x \in (A \cap B \cap C)\}$ (Assumption)
 $\Rightarrow \{x | x \in A \wedge x \in B \wedge x \in C\}$ (Definition of intersection)
 $\Rightarrow \{x | x \in A \wedge x \in B\}$ (Simplification)
 $\Rightarrow \{x | x \in (A \cap B)\}$
- c) $(A - B) - C \subseteq A - C$
 $\{x | x \in (A - B) - C\}$ (Assumption)
 $\Rightarrow \{x | x \in A \wedge x \notin B \wedge x \notin C\}$ (Definition of difference)
 $\Rightarrow \{x | x \in A \wedge x \notin C\}$ (Simplification)
 $\Rightarrow \{x | x \in (A - C)\}$
- d) $(A - C) \cap (C - B) = \emptyset$
 $(A \cap C) \cap (B - C)$
 $= (A \cap C) \cap (B \cap \bar{C})$
 $= (A \cap B) \cap (C \cap \bar{C})$
 $= (A \cap B) \cap \emptyset$ (Complement law)
 $= \emptyset$ (Domination law)
- e) $(B - A) \cup (C - A) = (B \cup C) - A$
 $\{x | x \in (B - A) \vee x \in (C - A)\}$ (Assumption)
 $\Rightarrow \{x | (x \in B \wedge x \notin A) \vee (x \in C \wedge x \notin A)\}$ (Definition of difference)
 $\Rightarrow \{x | x \notin A \wedge (x \in B \vee x \in C)\}$ anti - Distribution
 $\Rightarrow \{x | x \in (B \cup C) - A\}$ (Definition of difference)

Exercise 2 **(10 points)**

Draw the Venn diagrams for each of these combinations of the sets A, B, and C.

- a) $(A \cup (B - C)) \cap D$
- b) $(A - B) \cup (A - C) \cup (B - C)$

Exercise 3 **(10 points)**

Can you conclude that $A = B$ if $A, B,$ and C are sets such that

- a) $A \cup C = B \cup C$?
No,
Counter example:
Let $A = \{1, 2, 3, 4, 5\}, B = \{1, 2, 3, 4\}, C = \{5\}$
 $A \cup C = \{1, 2, 3, 4, 5\}$
 $B \cup C = \{1, 2, 3, 4, 5\}$
We get, $A \cup C = B \cup C$ but A does not equal B .
- b) $A \cap C = B \cap C$?
No,
Counter example:
Let $A = \{1, 2, 3\}$
 $B = \{1, 2\}$
 $C = \{1\}$
 $A \cap C = \{1\} = B \cap C$ but A does not equal B .
- c) $A - C = B - C$ and $C - A = B - A$?
No,
Let $A = \{1, 2, 3\}, B = \{1, 4, 3, 6\}, C = \{2, 4, 6\}$
 $A - C = B - C = \{1, 3\}$
 $C - A = \{4, 6\} = B - A$
But A and B are not equal.

Exercise 4 **(10 points)**

Find the domain and range of these functions. Note that in each case in order to find the domain, determine the set of elements assigned values by the function.

- a) The function that assigns to each nonnegative integer its first digit
- b) The function that assigns to a bit string the number of one bits in the string
- c) The function that assigns to each non-negative integer its 3rd power and returns the last digit
- d) The function that raises 2 to the non-negative integer assigned to the function

Exercise 5 **(10 points)**

Give an example of a function from \mathbf{Z} to \mathbf{N} that is

- a) one-to-one but not onto.

$$F(x) = x^2$$

- b) onto but not one-to-one

$$F(x) = \lfloor |x|/3 \rfloor$$

- c) both onto and one-to-one (but different from the identity function)

$$F(x) = \begin{cases} 2(x-1) & \text{if } x > 0 \\ -2x+1 & \text{if } x < 0 \\ x & \text{if } x = 0 \end{cases}$$

- d) neither one-to-one nor onto.

$$F(x) = |x|+1$$

Exercise 6 **(10 points)**

Determine whether each of these functions is a bijection from \mathbf{R} to \mathbf{R} .

a) $f(x) = -3x+1$

b) $f(x) = -3x^2-7$

c) $f(x) = (x+1)/(x-2)$

d) $f(x) = x^3+1$

Exercise 7 **(10 points)**

Let $f(x) = ax^2 + bx + c$ and $g(x) = 2dx + e$, where a, b, c, d and e are constants. Determine necessary and sufficient conditions on the constants a, b, c, d and e so that $f \circ g = g \circ f$.

$$\begin{aligned} f(g(x)) &= a(2dx + e)^2 + b(2dx + e) + c \\ &= 4ad^2x^2 + 4adex + ae^2 + 2bdx + be + c \\ &= (4ad^2)x^2 + (4ade + 2bd)x + ae^2 + be + c \end{aligned}$$

$$\begin{aligned} g(f(x)) &= 2d(ax^2 + bx + c) + e \\ &= (2ad)x^2 + (2bd)x + 2dc + e \end{aligned}$$

So it is the following conditions are necessary:

$$4ad^2 = 2ad$$

$$\rightarrow 2d = 1$$

$$\rightarrow d = \frac{1}{2}$$

$$2bd = 4ade + 2bd$$

$$\rightarrow 4ade = 0,$$

$$\rightarrow a = 0 \text{ or } e = 0$$

$$ae^2 + be + c = 2dc + e$$

$$\rightarrow ae^2 + be + c = 2\left(\frac{1}{2}\right)c + e$$

$$\rightarrow ae^2 + be = e$$

$$\rightarrow e(ae + b) = e$$

$$\rightarrow ae + b = 1; ae = 0 \text{ since } a = 0 \text{ or } e = 0$$

$$\rightarrow \text{then } b = 1$$

Exercise 8 (10 points)

Let f be a function from A to B . Let S and T be subsets of B . Show that:

Let Q and R be 2 subsets in A such that $f(Q) \rightarrow S$ and $f(R) \rightarrow T$

$f^{-1}(S) \rightarrow Q$ and $f^{-1}(T) \rightarrow R$

a) $f^{-1}(S \cup T) = f^{-1}(S) \cup f^{-1}(T)$

Assume we have x such that $x \in f^{-1}(S \cup T)$

$$\implies x = f^{-1}(o) \text{ for some } o \in (S \cup T)$$

$$\implies o \in S \vee o \in T$$

$$\implies f^{-1}(o) \in Q \vee f^{-1}(o) \in R$$

$$\implies x \in Q \vee x \in R$$

$$\implies x \in (Q \cup R)$$

Assume we have x such that $x \in (f^{-1}(S) \cup f^{-1}(T))$

$$\implies x \in (Q \cup R)$$

Then they are equivalent

b) $f^{-1}(S \cap T) = f^{-1}(S) \cap f^{-1}(T)$.

Exercise 9 (10 points)

Prove or disprove each of these statements about the floor and ceiling functions.

a) $\lceil \lfloor x \rfloor \rceil = \lfloor x \rfloor$ for all real numbers x .

b) $\lfloor x+y \rfloor = \lfloor x \rfloor + \lfloor y \rfloor$ for all real numbers x and y .

c) $\lceil \lfloor x/3 \rfloor / 2 \rceil = \lfloor x/6 \rfloor$ all real numbers x .

- d) $\lfloor \sqrt{\lfloor x \rfloor} \rfloor = \lfloor \sqrt{x} \rfloor$ for all positive real numbers x .
e) $\lfloor x \rfloor + \lfloor 2y \rfloor + \lfloor 2x+y \rfloor \leq \lfloor 3x \rfloor + \lfloor 3y \rfloor$ for all real numbers x and y .

Exercise 10

(10 points)

Fuzzy sets are used in artificial intelligence. Each element in the universal set U has a **degree of membership**, which is a real number between 0 and 1 (including 0 and 1), in a fuzzy set S . The fuzzy set S is denoted by listing the elements with their degrees of membership (elements with 0 degree of membership are not listed).

For instance, we write $\{0.6 \text{ Alice}, 0.9 \text{ Brian}, 0.4 \text{ Fred}, 0.1 \text{ Oscar}, 0.5 \text{ Rita}\}$ for the set F (of famous people) to indicate that Alice has a 0.6 degree of membership in F , Brian has a 0.9 degree of membership in F , Fred has a 0.4 degree of membership in F , Oscar has a 0.1 degree of membership in F , and Rita has a 0.5 degree of membership in F (so that Brian is the most famous and Oscar is the least famous of these people). Also suppose that R is the set of rich people with $R = \{0.4 \text{ Alice}, 0.8 \text{ Brian}, 0.2 \text{ Fred}, 0.9 \text{ Oscar}, 0.7 \text{ Rita}\}$.

- a) The **complement** of a fuzzy set S is the set S , with the degree of the membership of an element in S equal to 1 minus the degree of membership of this element in S .
Find \bar{F} (the fuzzy set of people who are not famous) and \bar{R} (the fuzzy set of people who are not rich).
- b) The **union** of two fuzzy sets S and T is the fuzzy set $S \cup T$, where the degree of membership of an element in $S \cup T$ is the maximum of the degrees of membership of this element in S and in T .
Find the fuzzy set $F \cup R$ of rich or famous people.
- c) The **intersection** of two fuzzy sets S and T is the fuzzy set $S \cap T$, where the degree of membership of an element in $S \cap T$ is the minimum of the degrees of membership of this element in S and in T .
Find the fuzzy set $F \cap R$ of rich and famous people.
