## American University of Beirut

Department of Electrical and Computer Engineering
EECE 311 - Electronic Circuits
Spring 2014
Midterm - March 21, 2014
Open Book - 120 minutes

NAME: $\qquad$ ID Number: $\qquad$
$\star$ All questions are equally graded

* PENALTY is four-to-one (four wrong answers cancel one correct answer, one to three wrong answers have no effect)
* Grading is based on the answers marked on the SCANTRON sheet only.
* There are $\mathbf{2 8}$ questions and $\mathbf{8}$ pages in this exam.
* Unless otherwise specified, neglect the effect of $V_{\mathrm{A}}$ (channel-length modulation in MOSFETs, or base-width modulation in BJTs)
* Assume $V_{\mathrm{T}}=25 \mathrm{mV}$ and $V_{\mathrm{BE}(\mathrm{ACTIVE})}=0.7 \mathrm{~V}$.

1. Find the exact $3-\mathrm{dB}$ frequency (in kHz ) for the amplifier with the following transfer function. Assume $A=8$.

$$
F_{H}(s)=\frac{1-\frac{S}{3 \times 10^{5}}}{\left(1+\frac{S}{A \times 10^{4}}\right)}
$$

a) 15.8
b) 13.7
c) 8.2
d) 10.0
e) 11.8

## 

2. Find the $3-\mathrm{dB}$ frequency (in kHz ) for the amplifier with the following transfer function. Use the most appropriate method to obtain a quick answer. Assume $A=2$.

$$
F_{H}(s)=\frac{1-\frac{S}{3 \times 10^{6}}}{\left(1+\frac{S}{A \times 10^{4}}\right)\left(1+\frac{S}{9 \times 10^{5}}\right)\left(1+\frac{S}{4 \times 10^{6}}\right)}
$$

a) 3.2
b) 4.8
c) 6.4
d) 8.0
e) 1.6

## 

3. Consider the amplifier gain function shown below. When the input voltage is
$v_{\mathrm{i}}(t)=7 \sin (\omega t) \mathrm{mV}$ with $\omega=2 \pi \times 3000 \mathrm{rad} / \mathrm{sec}$, the output is $v_{\mathrm{o}}(t)=X \sin (\omega t+\phi) \mathrm{mV}$. Find $X($ in mV$)$.

$$
A(s)=\frac{1000}{\left(1+\frac{s}{3 \times 10^{3}}\right)}
$$

a) 2123.2
b) 1625.5
c) 1313.2
d) 1100.2
e) 946.2
4. In the previous problem, find $\phi$ (in degrees).
a) -81.0
b) -79.2
c) -82.2
d) -72.3
e) -76.6

## 

The asymptotic magnitude Bode plot of an amplifier with three poles and no zeros is shown below.

5. Find the slope of segment CD in $\mathrm{dB} /$ decade.
a) -30
b) -10
c) -40
d) -20
e) -60

The reference current in the circuit shown below is $60 \mu \mathrm{~A}$. Assume $V_{\mathrm{DD}}=2 \mathrm{~V}$ and that $(W / L)_{1}$ for MOSFET $Q_{1}$ is 10 , while $(W / L)_{2}$ for MOSFET $Q_{2}$ is 15 .
For the two MOSFETs, $k_{\mathrm{n}}^{\prime}=400 \mu \mathrm{~A} / \mathrm{V}^{2}$, and $V_{\mathrm{t}}=0.5 \mathrm{~V}$.

6. What is the minimum value of output voltage $V_{\mathrm{O}}($ in V$)$ to maintain proper current source operation?
a) 0.200
b) 0.245
c) 0.173
d) 0.155
e) 0.346
7. Find the output current $I_{\mathrm{O}}$ (in $\mu \mathrm{A}$ ) when a resistor $R_{\mathrm{S}}=2 \mathrm{k} \Omega$ is inserted between the source of $Q_{2}$ and ground (as shown below). All other parameters are unchanged.

a) 47.4
b) 33.6
c) 31.6
d) 36.4
e) 40.4
8. Assume that after adding the resistor $R_{\mathrm{S}}=2 \mathrm{k} \Omega$ between source of $Q_{2}$ and ground, the reference current was adjusted such that for $Q_{2}, r_{02}=20 \mathrm{k} \Omega$ and $g_{\mathrm{m} 2}=0.2 \mathrm{~mA} / \mathrm{V}$. Find the output resistance (in $\mathrm{k} \Omega$ ) of the current source.
a) 42
b) 46
c) 34
d) 38
e) 30

In the circuit shown below, assume that for the MOSFETS, the small-signal parameters are: $g_{\mathrm{m} 1}=4 \mathrm{~mA} / \mathrm{V}, g_{\mathrm{m} 2}=2 \mathrm{~mA} / \mathrm{V}, r_{\mathrm{o} 1}=34 \mathrm{k} \Omega$, and $r_{\mathrm{o} 2}=48 \mathrm{k} \Omega$. The signal and load resistances are $R_{\mathrm{sig}}=5 \mathrm{k} \Omega$ and $R_{\mathrm{L}}=18 \mathrm{k} \Omega$. For high-frequency analysis, the MOSFETs have $C_{\mathrm{gs}}=2 \mathrm{pF}$ and $C_{\mathrm{gd}}=0.6 \mathrm{pF}$.

9. Find the OCTC resistance seen by a capacitor connected between the output node and ground (in $\mathrm{k} \Omega$ ).
a) 7.91
b) 8.82
c) 9.45
d) 9.98
e) 10.3
10. Apply Miller's theorem to find the total capacitance (in pF ) that appears between the output node and ground.
a) 1.01
b) 1.62
c) 1.22
d) 0.81
e) 0.41
11. Use Miller's approximation to find an estimate of $\omega_{3 \mathrm{~dB}}$, the 3-dB frequency of $\left|V_{o} / V_{\text {sig }}\right|$, in $\mathrm{Mrad} / \mathrm{s}$. Assume that $\omega_{3 \mathrm{~dB}}$ is determined by a single dominant pole at the input.
a) 10.89
b) 8.67
c) 6.45
d) 7.91
e) 23.45

## 

12. In the circuit shown below, the opamp is ideal. Assume $R_{2}=R_{4}=10 \mathrm{k} \Omega, R_{1}=1 \mathrm{k} \Omega$, and $R_{3}=1.02 \mathrm{k} \Omega$. Calculate the Common Mode Rejection Ratio (in dB ) of this difference amplifier.

a) 36.8
b) 60.8
c) 54.8
d) 48.8
e) 42.8

In the circuit shown below, the transistors are biased in the saturation region using two ideal current sources: $I_{1}=0.1 \mathrm{~mA}$, and $I_{2}=2 I_{1}$. The two large capacitors shown are open-circuits at DC , but can be considered as short-circuits for all signal frequencies of interest, and during OCTC calculations. The amplifier comprises two stages. The first stage is built around MOSFET $Q_{1}$, while the second stage is built around MOSFET $Q_{2}$.
Assume $R_{\mathrm{sig}}=R_{\mathrm{L}}=2 \mathrm{k} \Omega$. The two transistors have $k^{\prime}(W / L)=1 \mathrm{~mA} / \mathrm{V}^{2}$.

13. The $Q_{1}$ stage is a common-... stage, and the $Q_{2}$ stage is a common-... stage
a) source, drain
b) gate, source
c) source, source
d) drain, gate
e) gate, drain
14. Find the value of the resistor $R$ (in $\mathrm{k} \Omega$ ) to make the DC voltage at the gate of $Q_{2}$ equal to zero Volt.
a) 12.5
b) 10
c) 50
d) 25
e) 20
15. Find the small-signal voltage gain of the $Q_{2}$ stage, $v_{0} / v_{\mathrm{g} 2}($ in $\mathrm{V} / \mathrm{V})$.
a) 0.558
b) 0.641
c) 0.667
d) 0.717
e) 0.739
16. Assume in this question only that $R=22 \mathrm{k} \Omega$. Find the small-signal voltage gain of the $Q_{1}$ stage, $v_{\mathrm{g} 2} / v_{\mathrm{i}}($ in $\mathrm{V} / \mathrm{V})$.
a) 22.0
b) 9.8
c) 13.9
d) 15.6
e) 19.7
17. Find the input resistance of the amplifier, $R_{\text {in }}($ in $\mathrm{k} \Omega)$.
a) 1.12
b) 1.00
c) 2.24
d) 1.58
e) 1.41
18. Find the output resistance of the amplifier, $R_{\text {out }}($ in $\Omega)$.
a) 1000
b) 791
c) 707
d) 1581
e) 1118
19. Find the OCTC resistance seen by $C_{\text {gs1 }}($ in $\Omega)$.
a) 883
b) 667
c) 1056
d) 828
e) 717

## 

Assume in the circuit shown below that $g_{\mathrm{m}}=1.4 \mathrm{~mA} / \mathrm{V}, r_{\mathrm{o}}=20 \mathrm{k} \Omega, R_{\mathrm{sig}}=50 \mathrm{k} \Omega$, $R_{\mathrm{L}}=48 \mathrm{k} \Omega, R_{2}=2 \mathrm{k} \Omega$, and $R_{1}=150 \mathrm{k} \Omega$. The current source is ideal.

20. Find the low-frequency small-signal voltage gain $v_{0} / v_{\text {sig }}($ in $\mathrm{V} / \mathrm{V})$.
a) -9.22
b) -5.73
c) -8.00
d) -9.98
e) -11.39
21. Find the OCTC resistance seen by a capacitor connected between the output node and ground (in $\mathrm{k} \Omega$ ).
a) 21.8
b) 29.7
c) 33.9
d) 41.5
e) 36.6

For the circuit shown below, the BJT has $r_{0}=25 \mathrm{k} \Omega$ and very large $\beta$. The resistor values are $R=10 \mathrm{k} \Omega, R_{2}=1 \mathrm{k} \Omega, R_{3}=3 \mathrm{k} \Omega$, and $R_{\mathrm{sig}}=2 \mathrm{k} \Omega$. Assume $V_{\mathrm{CC}}=3 \mathrm{~V}$. The two large capacitors shown are open-circuits at DC, but can be considered as short-circuits for all signal frequencies of interest, and during OCTC calculations.

22. Find $g_{\mathrm{m}}$ of the BJT (in $\mathrm{mA} / \mathrm{V}$ ).
a) 8.00
b) 6.40
c) 32.00
d) 16.00
e) 10.67

For the following two problems assume that $\boldsymbol{g}_{\mathrm{m}}=30 \mathrm{~mA} / \mathrm{V}$.
23. Find the OCTC resistance seen by $\mathrm{C}_{\pi}$ (in $\Omega$ ).
a) 20.5
b) 89.7
c) 49.3
d) 33.6
e) 25.5
24. Find the transconductance of the amplifier $i_{0} / v_{\mathrm{i}}$ (in $\mathrm{mA} / \mathrm{V}$ ). Assume that a load resistance $R_{\mathrm{L}}=5 \mathrm{k} \Omega$ is connected across the output. The current $i_{\mathrm{o}}$ flows in the resistor $R_{\mathrm{L}}$.
a) 1.62
b) 3.23
c) 4.85
d) 6.46
e) 8.07

In the BJT amplifier circuit shown below, the device is biased using an ideal DC current source $I=2 \mathrm{~mA}$, and has $\beta=60$. The resistor values are: $R=60 \mathrm{k} \Omega, R_{1}=100 \mathrm{k} \Omega$, $R_{2}=2.0 \mathrm{k} \Omega$, and $R_{\mathrm{L}}=50 \mathrm{k} \Omega$. The five capacitors shown are open-circuits at DC, but can be considered as short-circuits for all signal frequencies of interest.

25. This amplifier is a common-... stage.
a) gate
b) drain
c) source
d) emitter
e) base
26. Find the voltage gain $v_{0} / v_{\mathrm{i}}$ in $(\mathrm{V} / \mathrm{V})$.
a) -10.91
b) -31.86
c) -25.76
d) -21.61
e) -16.29
27. Find the output resistance, $R_{\mathrm{o}}$ (in $\mathrm{k} \Omega$ ). Assume in this question only that $V_{\mathrm{A}}=25 \mathrm{~V}$, and that Early effect does not affect the DC analysis (i.e. $I_{\mathrm{C}}=I_{\mathrm{S}} \exp \left(V_{\mathrm{BE}} / V_{\mathrm{T}}\right)$ ).
a) 85.0
b) 87.5
c) 82.2
d) 74.5
e) 79.0
28. Find $R_{\text {sig }}($ in $\mathrm{k} \Omega)$ if $v_{\mathrm{i}} / v_{\mathrm{sig}}=0.6$.
a) 14.40
b) 16.07
c) 17.54
d) 12.66
e) 10.23
