Homework 1 – Solution

Problem 1

Determine whether the following signal is periodic. If it is periodic, find its period.

$$x(t) = \sin\left(\frac{5}{13}\pi^2 t\right)$$

$x(t)$ is periodic with a period $T=26/5\pi$ seconds

Problem 2

Determine whether or not the following signal $f(t)=4u(t)+2\sin(3t)$ is periodic. If the signal is periodic, determine its fundamental period.

The signal $f(t)$ is not periodic

Reason: $u(t)$ is not a periodic signal

Problem 3

Determine whether or not each of the following signals is periodic. If the signal is periodic, determine its fundamental period.

a) $x(t) = \left[\cos\left(\frac{\pi}{3}t - \pi\right)\right]^3$

$X(t)$ is periodic with a period $T=6$ seconds

b) $x(t) = \cos\left(\frac{\pi}{3}t\right) + \sin\left(\frac{3\pi}{4}t - \pi\right)$

The cosine function is periodic with a period $T=6$ seconds. The sine function is also periodic with a period $T=8/3$ seconds. $X(t)$ is also periodic with a period of 24 seconds

Problem 4

Consider the periodic signal $x(t)$ given by the expression

$$x(t) = (2 + 2j)e^{-j3t} - 3je^{-j2t} + 5 + 3je^{j2t} + (2 - 2j)e^{j3t}$$

Determine the period of $x(t)$ and its fundamental frequency.

$$T = 2\pi \text{ seconds}, \omega_0 = 1 \text{ rad / s}$$

Problem 5

a. Consider the everlasting signal $x(t) = e^{-at}$. Is X(t) an energy signal?

$$E = \int_{-\infty}^{\infty} x^2(t) dt = \infty, \text{ therefore X(t) is not an energy signal.}$$

b. For which values of “a” X(t) is a power signal? Determine its average power.

X(t) is a power signal if a is a complex quantity. In this case $P_{av}=1$ Watt.

Problem 6

Classify these signals into energy-type signals, power-type signals, and signals that are neither energy type nor power type signals. For energy-type and power-type signals, find the energy or the power content of the signals

a. $f(t) = 4e^{j2\pi f_0 t} + 3e^{j(2\pi f_1 + \theta)t}$

Solution: Each of the above signal is periodic. Each is a power signal, therefore f(t) is a power signal if the sum is periodic. Average power=16+9=25 Watts

b. $f(x) = e^{-2|t|}$

Solution: The above signal is an energy signal as most of the energy is concentrated within a finite period of time.

$$E = 2 \int_0^{\infty} e^{-t} dt = 2 \text{ Joules}$$

Problem 7

Categorize each of the following signals as an energy signal or a power signal. Sate the reason for your answer.

(a) The continuous-time signal x(t), defined by

$$x(t) = \begin{cases} 3e^{-2t}, & t \geq 0, \\ 0, & \text{otherwise.} \end{cases}$$

E is finite. Energy Signal

- (b) The continuous-time signal $z(t)$, defined for $-\infty < t < \infty$ by
 $z(t) = 3 \sin(\pi t) + 2 \cos(3\pi t)$

Periodic. Power Signal

- (c)

None

Problem 8

Consider the signal shown below

- a. What is the total energy of the signal $x(t)$

The total energy is given by:

$$E = \int_{-\infty}^{+\infty} |f(t)|^2 dt = \int_{-T_1}^{T_1} A^2 dt = 2A^2T_1 \text{ Joules}$$

- b. What is the time-averaged power of the signal $x(t)$

The time-averaged power is given by:

$$P = \lim_{T \rightarrow \infty} \frac{1}{T} \int_{-T_1/2}^{T_1/2} |f(t)|^2 dt = 0$$

Problem 9

Consider the signal shown below

$$x(t) = \begin{cases} \frac{1}{\sqrt{t}} & t > 1 \\ 0 & t \leq 1 \end{cases}$$

- a. Determine the total energy of this signal. Is $x(t)$ an Energy Signal?

$$E = \int_1^{\infty} \frac{1}{t} dt = \infty$$

$X(t)$ is not an energy signal

- b. Determine the average power of this signal. Is $x(t)$ a power signal.

$$P = \lim_{T \rightarrow \infty} \frac{1}{T} \int_{-T/2}^{T/2} \frac{1}{t} dt = \text{does not exist .}$$

$X(t)$ is not a power signal.

Problem 10

A continuous-time signal $g(t)$ is defined as:

$$g(t) = \begin{cases} 12 \cos^2(2\pi t), & -8 < t < 31 \\ 0, & \text{elsewhere} \end{cases}$$

- a. Is $g(t)$ an energy signal? Show your work.

$g(t)$ is an energy signal as it is a finite duration signal.

- b. Is $g(t)$ a power signal? Show your work.

$g(t)$ is not a power signal as it cannot be both energy and power.
