

MECH 430 Instrumentation and Measurements

Spring 2012

Carol Azar

Department of Mechanical Engineering

Email: ca05@aub.edu.lb

Class Meetings

Tuesday, Thursday 11:00 – 11:50 pm, Bechtel Bldg. Room 405

Tuesday, Thursday 12:00 – 12:50 pm, Bechtel Bldg. Room 405

Office hours: Tuesday, Thursday 9:30am – 10:00am SRB, 2nd floor, ext. 3450

Labs

Mr. Amer Kiblawi – ak80@aub.edu.lb

Mr. Elie Kfoury – ek15@aub.edu.lb

Mr. Nareg Karaoghlanian – nk64@aub.edu.lb

Textbook

Figliola, R. and Beasley, D., Theory and design of Mechanical Measurements, Wiley, 5th Edition.

Prerequisites

PHYS 211: Electricity and Magnetism.

EECE 312: Electronics and Electronic Circuits.

Description

A course on the general concepts of measurement systems; classification of sensors and sensor types; interfacing concepts; data acquisition, manipulation, transmission, and recording; introduction to LabVIEW; application; team project on design, and implementation of a measuring device.

Objectives

The students will:

1. Learn the basic elements and practical considerations of a measurement system;
2. Learn the different types of sensors available and how to properly select and use sensors for various forms of physical quantities (thermal, fluid, chemical, mechanical, etc.);

3. Acquire knowledge on basic signal conditioning concepts: Filtering, A/D and D/A conversion, amplification, etc.;
4. Learn the principles of PC-based instrumentation through data acquisition and data processing;
5. Develop skills in using National Instrument's graphical programming language LabVIEW for virtual instrumentation and industrial automation;
6. Be able to build an instrument to measure a specific stimulus;
7. Perform tests on a sensor circuit according to the characteristics presented in class.
8. Work in teams to design and realize a real instrumentation system for a given application.
9. Develop technical writing and oral presentation skills.

Grading

Students will be graded according to the following:

Quizzes & Lecture Attendance	10%
Midterm	15%
Final	25%
Lab	30% (Assignment 12%, Midterm 18%)
Project	20%

Course Policy

Class attendance and quizzes

Class attendance will be taken in each lecture and will be graded.

Quizzes will be held during the first 15 minutes of class. You will not be given extra time if you are late.

Lab attendance and assignments

Lab attendance is mandatory. Any student who misses two lab sessions will receive a failing grade in the lab work. Assignments are expected to be presented according to the guidelines specified in the lab.

Project

The final measuring stick for this course is a project that involves both the design and implementation of an instrumentation system. You will be expected to write a report about your project according to the format presented on moodle.

Make-up tests

NO MAKE UP TEST WILL BE GIVEN. If you miss an exam for a justified cause (*e.g.*, with a medical report) the weight of the grade will change accordingly to compensate for your missed exam or an oral exam will be given. The lab midterm policy will be issued by the instructors.

Resources for the Course

Resources for the course include:

- MOODLE: Includes a forum, which acts like a center of focus for the course. Any concerns you might have or ideas you want the entire class to hear you can post on the forum. Furthermore, assignments, solutions, homework will be posted on Moodle.
- The text and references for the course.
- The library, the web.
