

MAT 235– Ordinary Differential Equations
2nd Midterm

- 1)** Write the form of a particular solution for each equation. (Do not calculate the constants)

a) $y'' - 2y' + 2y = (x+1)e^x \sin x + 3e^{2x}$

b) $y''' - 8y'' + 42y' - 104y + 169 = 3xe^{2x} \cos 3x - x^2 e^{2x} \sin 3x + e^{3x} \sin 2x.$

(**Hint :** Note that $x^4 - 8x^3 + 42x^2 - 104x + 169 = (x^2 - 4x + 13)^2$)

2) Solve the equation $y'' - 4y' + 4y = \frac{e^{2x}}{1+x}$.

(2)

(3)

3) a) Find the general solution of the equation

$$x^2 y'' + 7xy' + 5y = 0 \text{ (This is a Cauchy - Euler Equation)}$$

b) Find the general solution of the equation $x^2 y'' + 7xy' + 5y = x$.

(5)

4) Use the power series method to solve the initial value problem

$$y'' - 2xy' + 4y = 0, \quad y(0) = 1, \quad y'(0) = 0$$

5) Use Frobenius' method to solve

$$y'' + \frac{3}{x}y' + 4x^2y = 0$$
