

1. Consider the following information: (all written on paper)

- An *Employee* could be only one of these: a *Manager*, *Hourly Employee* or *Regular Employee*.
- All kinds of employees have the following information: SSN, Name, Address, City, Date of birth, Number of dependents, Date of Employment.
- A *Manager* has the following additional information: Number of Employees, Number of years in Department, Salary, and Number of rewards.
- An *Hourly Employee* has the following additional information: Hourly rate, and Number of hours per week.
- A *Regular Employee* has the following additional information: Manager SSN, Salary.
- All *Employees* (all kinds) has *Skills* (could be many skills where a skill could belong to many).
- A *Skill* is recorded as the following: Skill ID, Skill name, Skill specs
- One manager can manage only one *Department* where the number of management years should be recorded.
- *Regular Employees* work at exactly one department that could have many regular employees.
- *Hourly employees* can work in many departments that could have many hourly employees.
- A *Department* could be responsible of running many other *Departments* (could be run by only one)
- A *Department* has the following information: Name, number, and Number of employees.
- A *Manager* makes *reports*. A report should be made by one manager.
- A *Report* has the following information: Number, Date, Type, and Title.

2. Draw the **Full** (entities, relationships, attributes) **EER diagram**. (10 points)

3. Translate this EER diagram into a **relational database** by defining all the needed **relations** and the **referential integrities** between relations for such database. (10 points)

4. Write the SQL code for Report and Department tables stating the **primary key**, **foreign key** and **referential integrity** (if there is). (10 points)

5. Use SQL to insert a record in Department. Choose any values to insert (10 points)

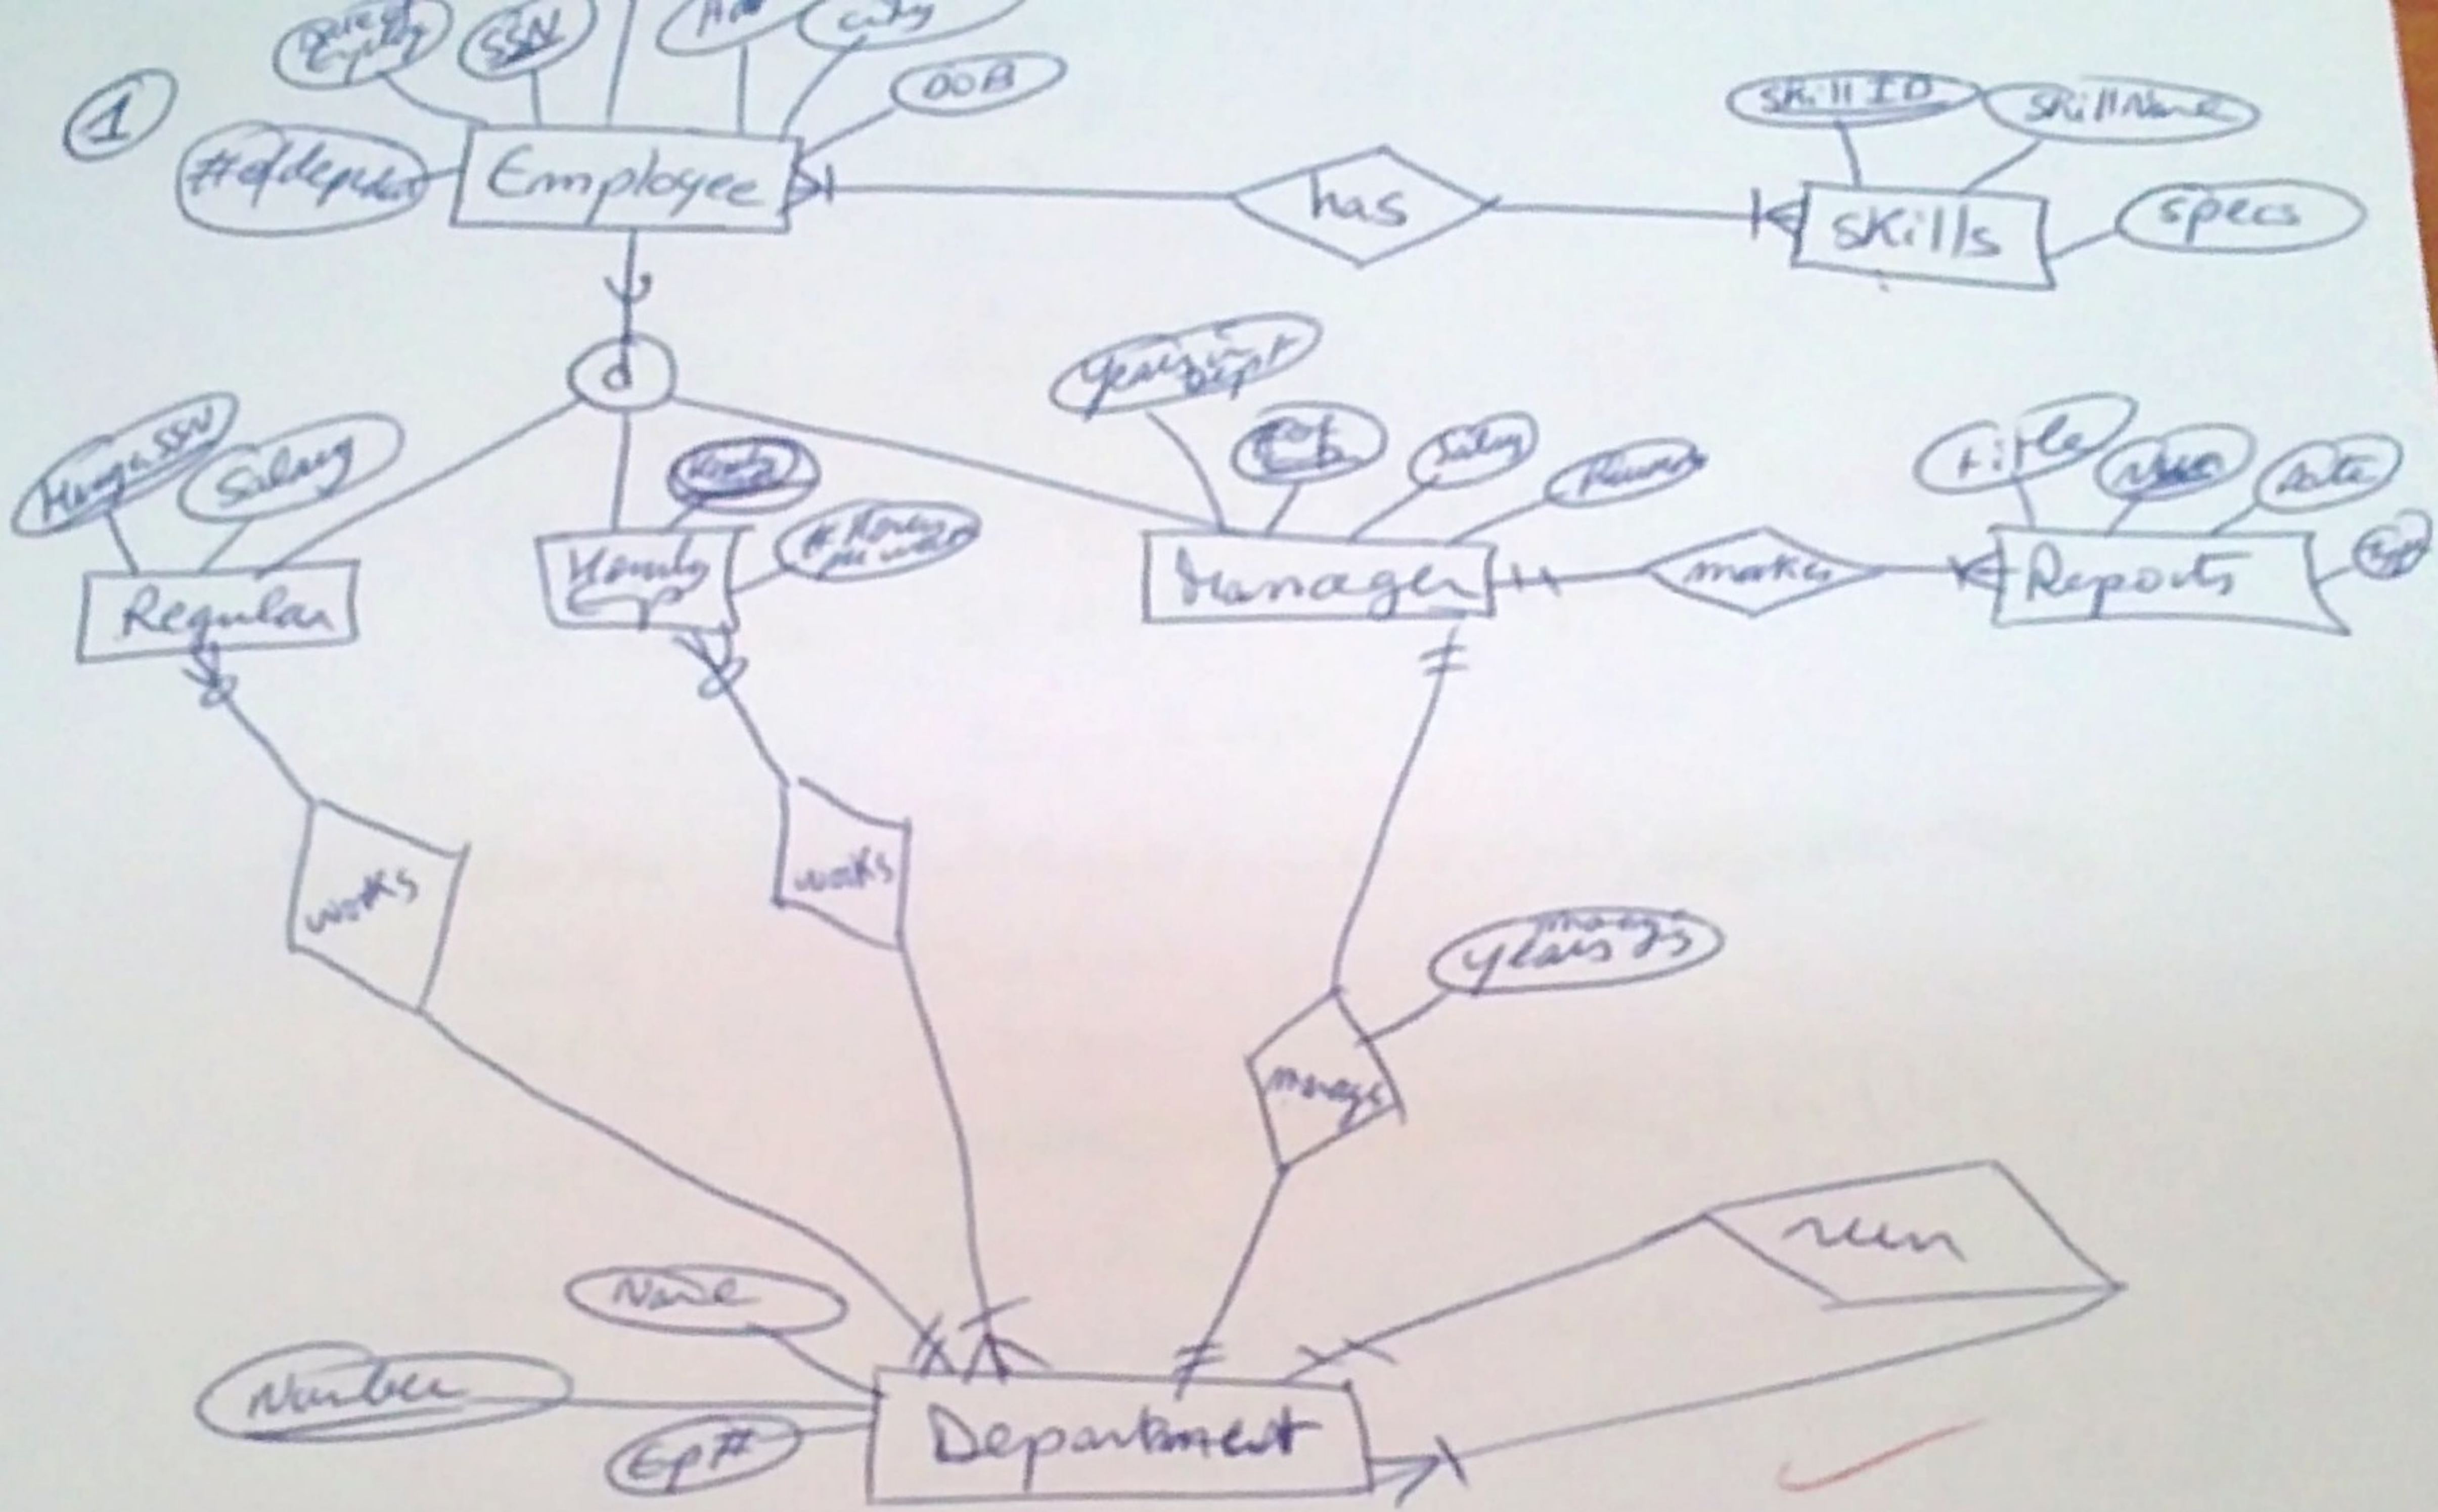

6. Write the SQL code for deleting Department d5 from the department table (10 points)

7. Write the SQL for increasing 10% for all hourly rates for hourly employees that work more than 25 hours a week (10 points)

8. For each of the following queries, write the SQL code (30 points/ 5 each)

1. Show the title, date and type of the reports who done on 2/2/2007.
2. Show all reports done by manager "john smith"
3. show all the manager that have the typing skill
4. For each dept show the dept number and the number of regular employees working at. *Count*
5. How many hourly employees work in Department D2?
6. What the sum of hours worked by hourly employee with SSN=1122334455?
7. Show info of all employees that live in an address that include the string "123 summit ave" in it (could be beginning, middle or end)

9. Write the **Algebra** and **calculus** for the first 3 queries (15 point)

② Employee (SSN, Name, DOB, Address, City, Date of Birth, # of Deps)

Regular (SSN, ManagerSSN, Salary, DNO)

Hourly (Rate, HoursPerWeek)

Manager (YearsInDept, Title, Salary, Rank)

Department (Name, Number, Ep#)

Reports (Title, User, Date)

② Employee (SSN, Name, DOB, Address, city, Date of Emp, # of Departments)

Regular (SSN, Managers, Salary, DNO)

Hourly (SSN, HourlyRate, # of hours per week)

Manager (SSN, # of Emp, Years, Salary, Rewards, DeptNum, WorkingYears)

Reports (Number, Date, Title, Type, EmpSSN)

Department (Number, Name, # of Emp, ParentDept)

WorksIn (HourlySSN, Number)

Skills (SkillID, SkillName, SkillSpec)

IsSkillfulIn (SkillID, SSN)

Solution

③

Create Table

(Number
Date
Title
Type
MgSSN
Primary Key
Foreign Key
On Delete

Report

Integer Not Null,
Date,
Char(10),
Char(10),
Varchar(9),
(Number),
(MgSSN) References Manager
Set Null On Update Cascade);

Create Table

(Number
Name
of Emp
Parent Dept
Primary Key
Foreign Key
On Delete

Department

Char(10) Not Null, ~~Primary Key~~
Char(10),
Integer,
~~Foreign Key~~ Char(10),
(Number),
(Parent Dept) References Department
Set Null, On Update Cascade);

④

Insert Into Department

(1, 'Department', 5, '0')

④ Insert Into Department
Values ('Advertising', 5, 'D');

⑤ Delete From Department where Number = 'd5';

⑥ Update Hourly
Set HourlyRate = 1.1 * HourlyRate
where # of hours per week > 25

⑦ 1) select R.title, R.date, R.type
from Reports As R
where R.date = '2/2/2007';

2) select R.
from Reports R, Employee E
where R.mgrSSN = E.SSN AND E.name = "John Smith";

3) select M.
from Manager As M, IsSkillful In I, Skills as S
where M.SSN = I.SSN AND I.SkillID = S.SkillID AND Skillname = "Typing";

4) Select D.Number, Count(*) As Number of Regular Employees
From ~~Department D, Regular~~
Where ~~D.Number = Regular, DNO.~~
Group By D.Number;

5) Select Count(*) As Newly-Emp # in D2
From ~~Department~~ Works In
Where Dumber = "D2";

7) Select *
From Employee
Where Address Like '* 123 summit ave *';

6) Select SUM (Hours per week)
From Hourly, Works In

8) 1) $\pi_{R.title, R.date, R.type} (\sigma_{R.date = 2/2/2007} (Report))$

$\{R.title, R.date, R.type \mid Report(R) \text{ AND } R.date = 2/2/2007\}$

2) $\pi_{R.r} (\sigma_{E.name = 'John Smith'} (\leftarrow_{E.SSN = R.r.SSN} Employee \bowtie Reports))$

$\{R.r \mid Employee(E) \text{ AND } (\exists R) (Reports(R) \text{ AND } R.r.SSN = E.SSN \text{ AND } E.name = 'John Smith'))\}$

3) $\pi_{M.r} (\leftarrow_{M.SSN = I.SSN} Manager \bowtie \leftarrow_{I.SkillID = S.SkillID} IsSkillfulIn \bowtie Skills)$

$\{M.r \mid Manager(M) \text{ AND } (\exists I) (IsSkillfulIn(I) \text{ AND } M.SSN = I.SSN \text{ AND } (\exists S) (Skills(S) \text{ AND } I.SkillID = S.SkillID \text{ AND } Skill.name = 'Typing'))\}$
